Based on the calculated moments, initial reinforcement sizes and spacing are chosen. The method encourages iterative adjustments to optimize material usage.

Step 3: Checking Structural Capacity

The reinforcement and concrete sections are checked against code limits for:

- Flexural strength
- Shear strength
- Axial capacity

If the section does not satisfy the criteria, reinforcement sizes are adjusted, and calculations are repeated.

Step 4: Detailing and Reinforcement Layout

Once the section is validated, detailed reinforcement layouts are prepared, considering placement constraints, minimum and maximum reinforcement ratios, and ductility requirements.
